

# Application Note: AN\_SY6280

## Low Loss Power Distribution Switch TARGET DESIGN SPECIFICATION Preliminary Spec

### General Description

The SY6280 develops ultra-low  $R_{ds(on)}$  switch with programmable current limiting to protect the power source from over current and short circuit conditions. It integrates the over temperature protection and discharges the output capacitor during the shutdown. In case the output is pulled higher than the input voltage under the shutdown, the SY6280 can block the current flowing from the output to the input.

### Ordering Information

SY6280□(□□)□

└─ Temperature Code  
└─ Package Code  
└─ Optional Spec Code

Temperature Range: -40°C to 85°C

Ordering Number	Package type	Note
SY6280AAC	SOT23-5	----

### Features

- Distribution voltages: 2.4V to 5.5V
- Programmable current limit
- Enable polarity: active high
- Over temperature shutdown and automatic retry
- Reverse blocking (no body diode)
- At shutdown, OUT can be forced higher than IN
- Automatic output discharge at shutdown
- Compact SOT23 packages minimize the board space.

### Applications

- USB 3G Datacard
- USB Dongle
- MiniPCI Accessories

### Typical Applications

Figure 1. Schematic Diagram

## AN\_SY6280

### Pinout (top view)

(SOT23-5)

Top mark: COxyz (Device code: CO, x=year code, y=week code, z=lot number code)

Pin Name	Pin number	Pin Description
IN	5	Input pin
GND	2	Ground pin
OUT	1	Output pin
EN	4	ON/OFF control. Pull high to enable IC. Do not float.
ISET	3	Current limit programming pin. Connect a resistor Rset from this pin to GND to program the current limit: $I_{lim} (A) = 6800 / R_{set} (ohm)$

### Absolute Maximum Ratings (Note 1)

All pins	6V
Power Dissipation, $P_D$ @ $T_A = 25^\circ C$ SOT23-5,	0.6W
Package Thermal Resistance (Note 2)	
$\theta_{JA}$	200°C/W
$\theta_{JC}$	130°C/W
Junction Temperature Range	150°C
Lead Temperature (Soldering, 10 sec.)	260°C
Storage Temperature Range	-65°C to 150°C
ESD Susceptibility (Note 2)	
HBM (Human Body Mode)	2kV
MM (Machine Mode)	200V

### Recommended Operating Conditions (Note 3)

IN	2.4V to 5.5V
All other pins	0-5.5V
Junction Temperature Range	-40°C to 125°C
Ambient Temperature Range	-40°C to 85°C

## Electrical Characteristics

( $V_{IN} = 5V$ ,  $C_L = 1\mu F$ , per channel,  $T_A = 25^\circ C$  unless otherwise specified)

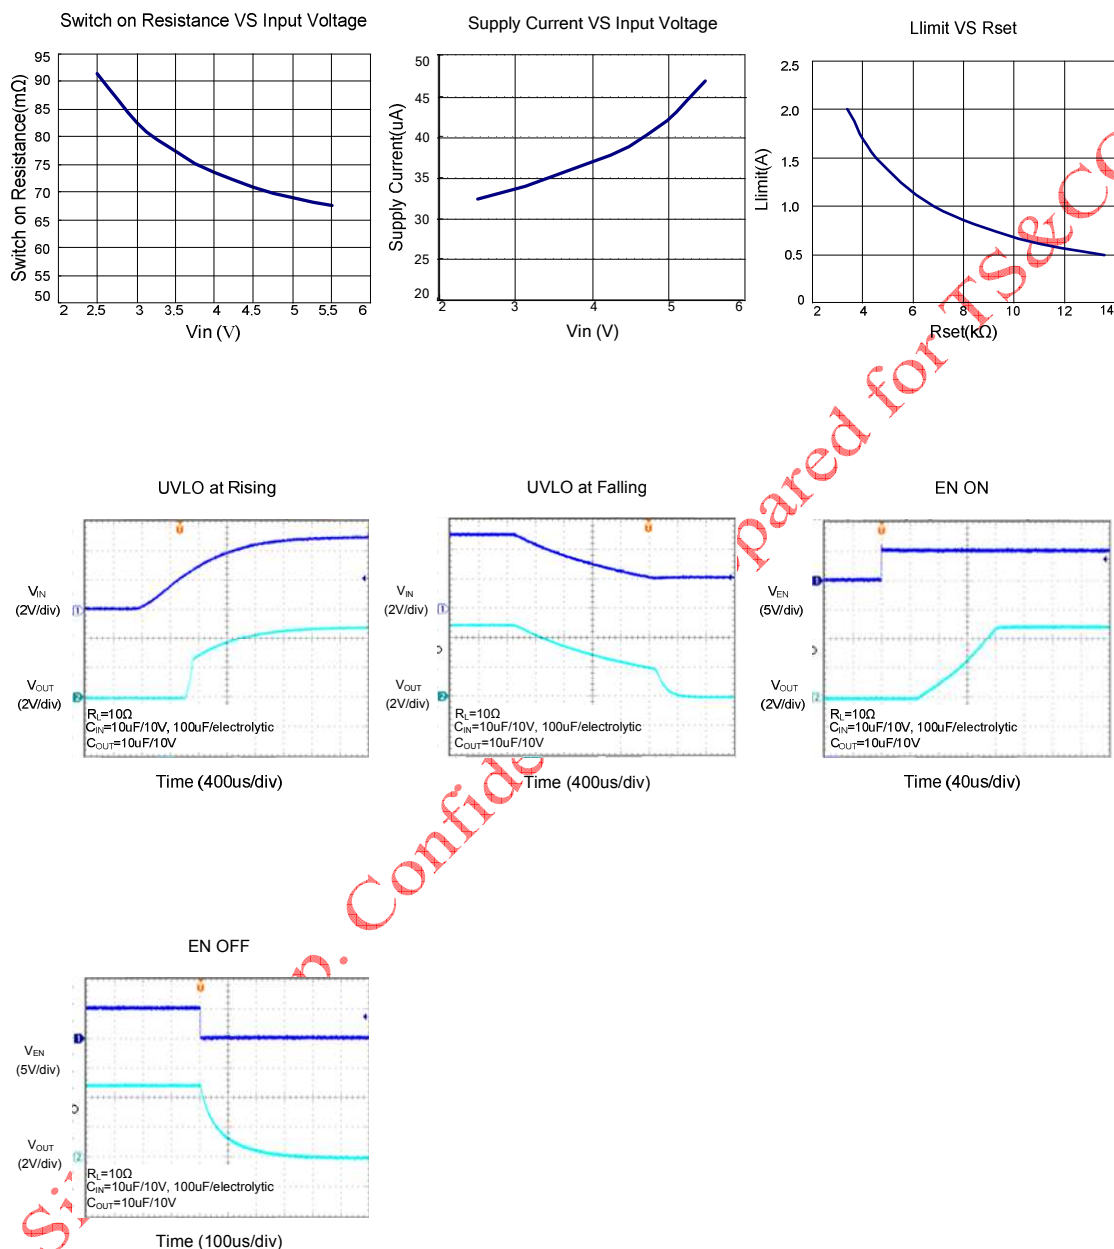

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Input Voltage Range	$V_{IN}$		2.4		5.5	V
Shutdown Input Current	$I_{SHDN}$	Open load, IC Disabled.		0.1	1	$\mu A$
Quiescent Supply Current	$I_Q$	Open load, IC Enabled.		25		$\mu A$
FET RON	$R_{DS(ON)1}$			80		m $\Omega$
EN Rising Threshold	$V_{EN(H)}$		2			V
EN Falling Threshold	$V_{EN(L)}$				0.8	V
EN Leakage	$I_{EN}$	$V_{EN} = 5.5V$			1	$\mu A$
IN UVLO Threshold	$V_{IN\cdot UVLO}$				2.3	V
IN UVLO Hysteresis	$V_{IN\cdot HYS}$			0.1		V
Over Current Limit	$I_{LIM}$	$R_{SET} = 6.8k\Omega$	0.75	1	1.25	A
	$I_{LIM(min)}$			0.4		A
	$I_{LIM(max)}$			2		A
Turn-ON Time	$T_{ON}$	$R_L = 10\Omega$		120		$\mu s$
Turn-OFF Time	$T_{OFF}$	$R_L = 10\Omega$ , $C_L = 1\mu F$		10		$\mu s$
OUT Shutdown Discharge Resistance	$R_{DIS}$			150		$\Omega$
Thermal Shutdown Temperature	$T_{SD}$			130		$^\circ C$
Thermal Shutdown Hysteresis				20		$^\circ C$

**Note 1:** Stresses listed as the above “Absolute Maximum Ratings” may cause permanent damage to the device. These are for stress ratings. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may remain possibility to affect device reliability.

**Note 2:**  $\theta_{JA}$  is measured in the natural convection at  $T_A = 25^\circ C$  on a low effective single layer thermal conductivity test board of JEDEC 51-3 thermal measurement standard. Pin 2 of SOT23-5 packages is the case position for  $\theta_{JC}$  measurement.

**Note 3:** The device is not guaranteed to function outside its operating conditions

## Typical Operating Characteristics

## Operation

The SY6280 is a current limited P-channel MOSFET power switch designed for high-side load-switching applications. There is no parasitic body diode between drain and source of the MOSFET, so the SY6280 prevents current flow from out to input when out being externally forced to a higher voltage than vin when chip is disabled.

### Over-current protection

When the over-current condition is sensed, the gate of the pass switch is modulated to achieve constant output current. Under output short circuit conditions, the normal current limit folded back 50%. If the over current condition persists for a long enough time, the junction temperature may exceed 130C, and over-temperature protection will shut down the part. Once the chip temperature drops to 110C, the part will restart.

### Supply Filter Capacitor

In order to prevent the input voltage drooping during hot-plug events, a 10uF ceramic capacitor from  $V_{IN}$  to GND is strongly recommended. However, higher capacitor values could reduce the voltage droop on the input further. Furthermore, an output short will cause ringing on the input without the input capacitor. It could destroy the internal circuitry when the input transient exceed 6V which is the absolute maximum supply voltage even for a short duration.

### Current Limiting Setting

Current limiting is programmable to protect the power source from over current and short circuit conditions. Connect a resistor  $R_{SET}$  from this ISET pin to GND to program the current limit:

$$I_{lim} (A) = 6800 / R_{set} (ohm).$$

## PCB Layout Guide

For best performance of the SY6280, the following guidelines must be strictly followed:

- Keep all  $V_{BUS}$  traces as short and wide as possible and use at least 2 ounce copper for all  $V_{BUS}$  traces.
- Place a ground plane under all circuitry to lower both resistance and inductance and improve DC and transient performance.
- Locate the output capacitor as close to the connectors as possible to lower impedance (mainly inductance) between the port and the capacitor and improve transient performance.
- Input and output capacitors should be placed closed to the IC and connected to ground plane to reduce noise coupling.
- Locate the ceramic bypass capacitors as close as possible to the  $V_{IN}$  pins and  $V_{OUT}$  pins of SY6280.

PCB Layout Guide(SOT23-5)

## SOT23-5 Package outline & PCB layout design

**Notes: All dimensions are in millimeters.**

**All dimensions don't include mold flash & metal burr.**
